

INTOMEDI® Phytoncide Dermacare™

The proper skincare is first.

The skin gets drier, thinner, and more sensitive in recent times due to various factors including lack of sleep, stress, too much use of cosmetics, irritation caused by treatment, harmful environments such as UV rays. Daily skin care for dry and sensitive skin is increasingly important.

Apply "phytoncide" to the skin.

For dry and sensitive skin of modern people, we have formulated only with the mild and high efficiency components based on Phytoncide (cypress). These components will be absorbed into your body through the skin to provide you with the effects like as living in the forest.

The secret strength of natural recovery hidden in the skin

Backed by the cell science research of INTOMEDI, Bio-peptone® is the core technology of Phytoncide Derma Care™ to promote natural recovery and solve skin problems fundamentally by activating cells.

Hypoallergenic derma formula for sensitive skin

Dermatologically tested, all products in Phytoncide Dermacare™ line are safe and effective for the daily skin care of entire family from children with delicate skin easily exposed to bacteria to adults with sensitive skin.

Why is our skin more sensitive?

Due to ...

Harmful environments such as UV rays, pollution

Irritation caused by dermatological treatments

A lack of sleep or stress

Too much use of cosmetics

Frequent shower & sauna

Bad eating habits

Air conditioner & heater
